

Metalot Future Energy Lab

Project Description

The project focusses on the **creation and development** of the **Metalot Future Energy Lab** as an **innovation cluster** for the Metal Power community.

The goals are to make the community **self-sufficient** and **ready for further expansion** by having established:

- efficiently functioning **Management** and **Executive Teams**, that are building a well-connected network around a clear vision and roadmap for Metal Power.
- a **R&D infrastructure** for the benefit of future projects, providing a safe environment and support for prototype testing on scale bridging academia and industry.

The support by the Province together with the contributions of the other **Founding Fathers** are **key** for the **Metalot foundation** to **accelerate innovation** from conceptual **idea to market** adoption.
